

IK WIL

Short recap day #1

Peter Kassenaar –
info@kassenaar.com

Agenda - roughly

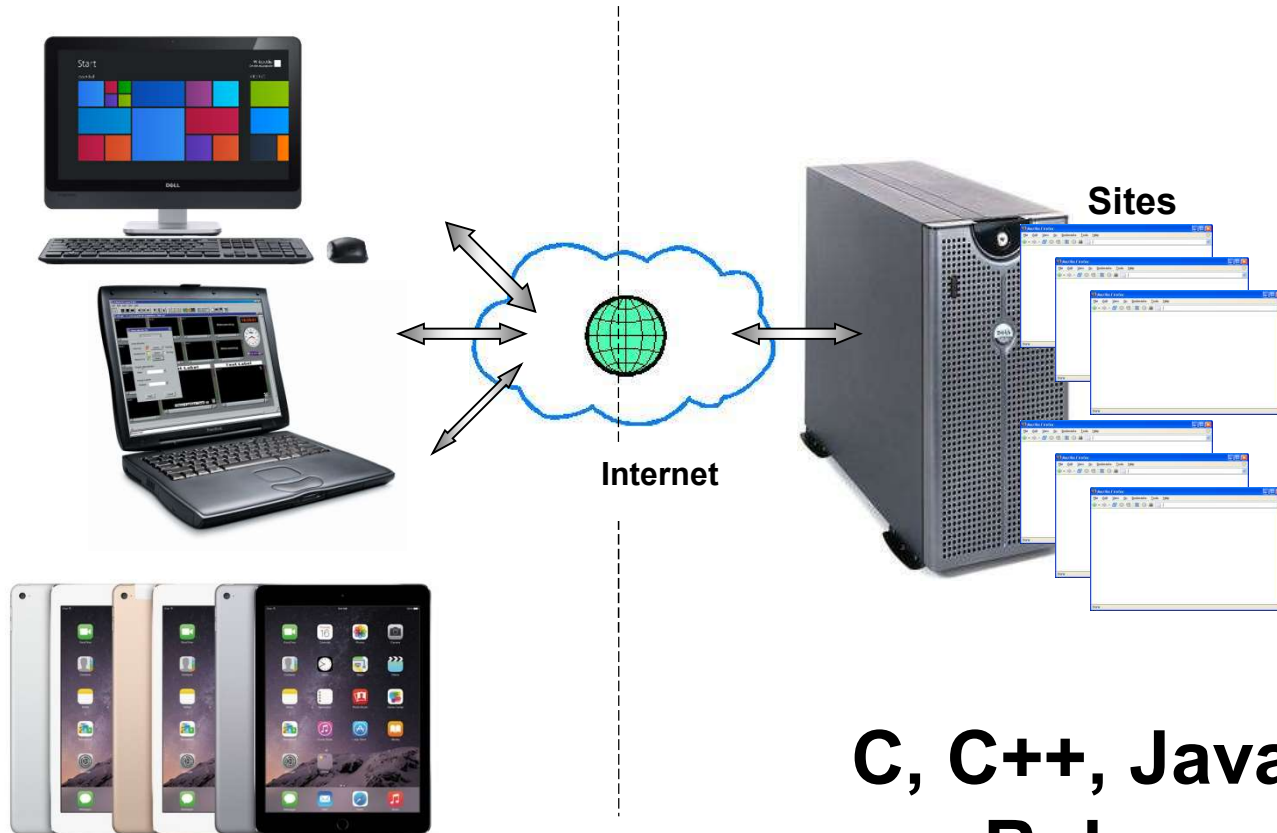

Day 1 – Overview of the frontend landscape – HTML, CSS, JavaScript

Dag 2 – Introduction Vue

Dag 3 – More Vue, Vuetify,
Communication with API's

Client

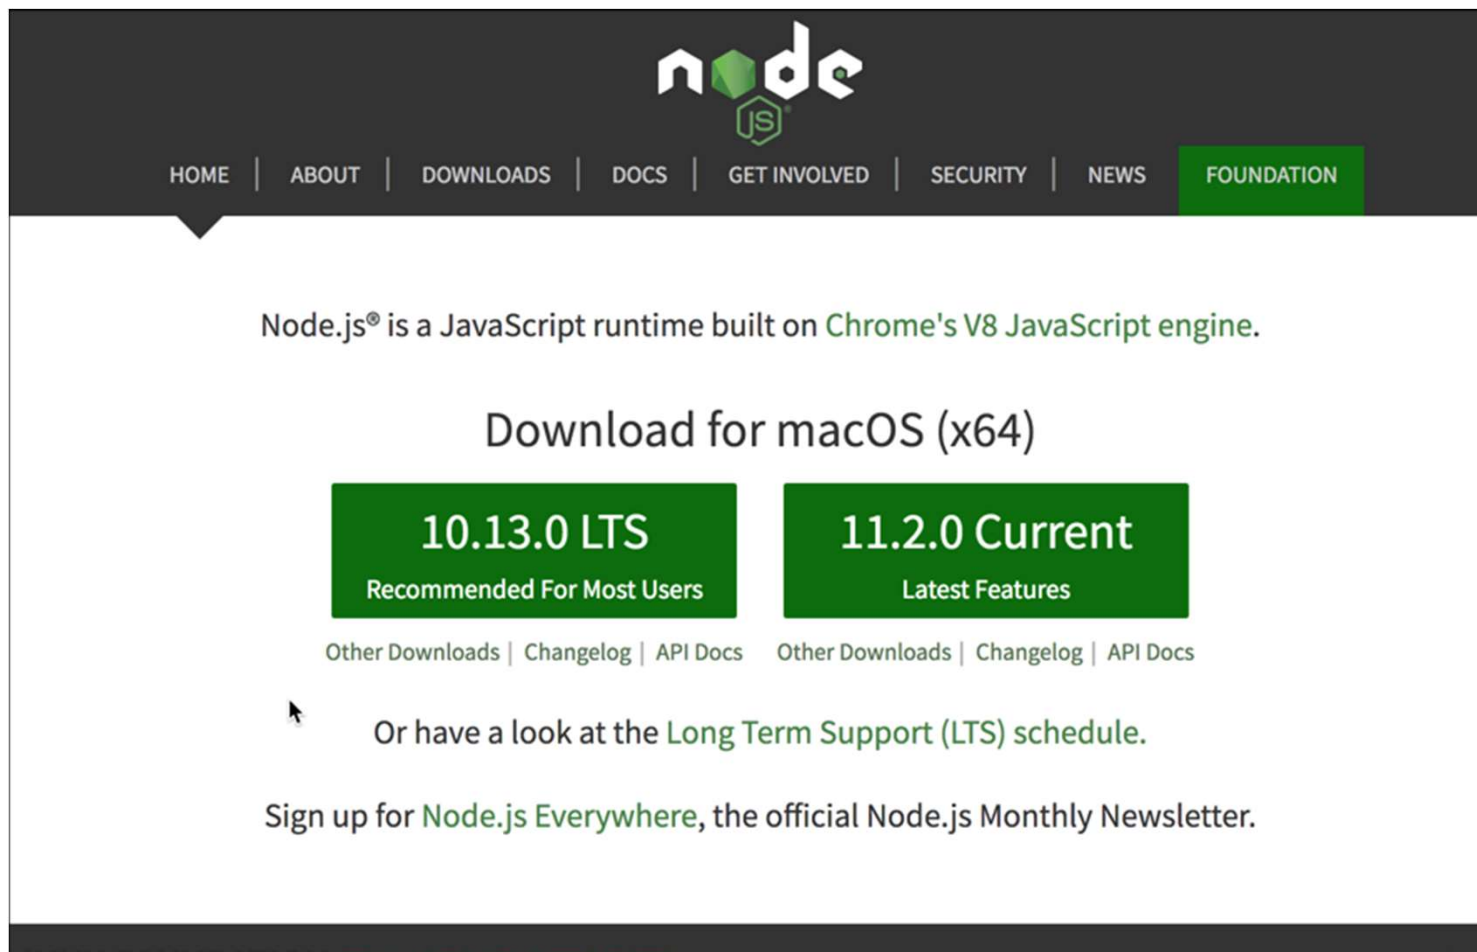

Server

**HTML,
CSS,
JavaScript**

**C, C++, Java,
Ruby,
Python, PHP,
C#, ...**

Node.js - JavaScript Runtime

<https://nodejs.org/en/>

Editors

The collage features the JetBrains website header with navigation links like 'ALL TOOLS', 'IDEs', and 'STORE'. Below it is the 'WebStorm' section with a large 'WS' logo and version information: 'Version: 2016.3.2', 'Build: 163.9166.30', and 'Released: December 13, 2016'. A 'Download Webstorm' button is visible. Overlaid on this is the Visual Studio Code download page, which says 'Code editing. Redefined.' and 'Free. Built on open source. Runs everywhere.' with a 'Download for Windows' button. In the bottom left, a screenshot of the Notepad++ editor shows a C++ file named 'Notepad_plus.cpp' with a function 'getHtmlXmlEncoding'. In the bottom right, a screenshot of the Visual Studio Code editor shows a JavaScript file named 'serviceWorker.js' with a function 'registerValidServiceWorker'. The status bar at the bottom of the Notepad++ window indicates 'C length: 208566 lines: 5831 Ln: 863 Col: 19 Sel: 0|0 Dos\Windows ANSI as UTF-8 INS'.

1. Position of HTML

A site/page/app/component
(User Interface) is **always** based
on:

HTML5
(structure)

JavaScript/DOM
(behavior/intelligence)

CSS
(presentation)

Tags

- HTML In total : about **120** different *tags*.
- **Container tags**
 - Always in pairs. Have a *beginning*- and *end* tag
 - For instance bold: `...`
and headings `<h1>....</h1>`
- **Open tags**
 - One-off action, For instance a horizontal rule `<hr>`
- **Attributes**
 - Extend the possibilities of tags

Tags for

- Structural elements

- `<h1>`, `<p>`, `
` etc.

- Links

- `<a>...`

- Images

- ``

- Lists

- ``, ``, ``

- There is more...

- <https://www.w3schools.com/html/default.asp>

2. CSS - Basic syntax

```
body{  
    color : #FF99CC;  
    background-color : #FFFFFF;  
    font-family : arial, sans-serif;  
    margin : 10px;  
    padding : 10px;  
}
```

Important concepts:

- *selectors en declarations*
- CSS- “rules”

Multiple types of Selectors

- Elements Selectors

`p {...} body {...} ul {...}`

- Class selectors

`.className {... }`

- Id selectors

`#idName {...}`

- Contextual selectors, pseudo selectors/classes

- https://www.w3schools.com/css/css_pseudo_classes.asp

CSS- box model

- Set white space **inside** and **outside** the element
- Give elements some air in relation to each other
- Order: *top right bottom left*

3. JavaScript Point of departure

- JavaScript itself (EcmaScript) is de **language** (*core language*)
- JavaScript has different **execution contexts**
 - Client sided (browser)
 - Server sided (webserver)

JavaScript

- Statements
 - Syntax rules
- Variables –
 - Simple values : `Boolean`, `string`, `number`
 - Complex values: `Array`, `Object`, `Function`
- JavaScript works with the browser
 - `Document.getElementById(...)` etc.

Questions?

Agenda - roughly

Day 1 – Overview of the frontend landscape – HTML, CSS, JavaScript

Dag 2 – Introduction Vue

Dag 3 – More Vue, Vuetify,
Communication with API's

Day #2 – Introduction Vue

- **Introduction** – short recap, overview of the front-end landscape
- Vue **tooling** – installation, cli, devtools
- The **structure and architecture** of Vue apps.
 - Hello World
- Zooming in:
 - Components, data binding, attribute binding, event **binding**
